

BP Aero Services Warranty Repair Policy

BP Aero Services, LLC (BPAS) warrants that all workmanship has been inspected, repaired or overhauled in accordance with the Original Equipment Overhaul Manual and that any overhaul or repair services will be free from material defects and covered by a warranty on such defects in workmanship from the date of shipment by BPAS according to the following table:

	<u>Repair</u>	<u>Overhaul</u>
All Items	6 months or 500 hours, whichever comes first	12 months or 1000 hours, whichever comes first

With regard to materials or parts which are installed by BPAS, BPAS will, to the extent permitted by contract with the original equipment manufacturer (OEM), pass the then existing terms and conditions of any OEM's warranty then in effect and applicable to the replacement part or material, if any, through to customer.

If BPAS's workmanship fails to comply with the applicable warranty set forth above, BPAS with regard to any such defects in workmanship will make the repairs, replacements, and corrections necessary free of charge to ensure such items comply in all respects with said warranty. If any replacement parts or materials fail to comply with the provisions of any applicable OEM warranty, BPAS, to the extent provided by the OEM Warranty, will make the repairs, replacements, and corrections necessary free of charge to ensure such items comply in all respects with said OEM Warranty. Warranty claim determinations will be reasonably made based on, but not limited to, inspection findings, functional tests, failure analysis, and data logs. This warranty does not apply to abnormal wear of items unless such wear can be directly related to a defect in the workmanship.

Under no circumstances will BPAS be responsible for consequential, or incidental damages or lost profits or delay damages which are hereby specifically excluded from the terms of this warranty.

Warranty denial will result, but is not limited to the following conditions: component received fully or partially disassembled, component received with signs of external damage resulting from mishandling or misuse, other findings pointing to mishandling or misuse, or evidence that another party other than BPAS has attempted to remedy the warranty condition. Warranty denial may also occur if the investigation determines that failure is caused by aircraft/system deficiencies, customer caused damage/misuse, shipping or handling damage not caused by BPAS, or exposure to environmental conditions in excess of those published in the original equipment manufacturer's manual.
